## STRUCTURES

The Modular Building Experts

Phone: 800-366-6385 • [www.frey-moss.com](http://www.frey-moss.com)

### Expertise

Frey-Moss has manufactured and installed buildings and canopies in 47 states and 27 countries.

### Quality

Modular Buildings designed, fabricated and assembled at one of our two manufacturing plants located in Conyers, Georgia or Portland, Oregon.

### Service

Super Fast Site Installation!  
A complete building delivered and installed at the site in a few days. All equipment, mechanical, electrical and plumbing systems in place and tested.

### Experience

When choosing a modular construction company, choose one with experience! At Frey-Moss we make your construction process smooth and hassle-free from beginning to customer acceptance.

## Why a Frey-Moss Modular?

- **Accelerated Construction Schedule** - A modular building is typically completed on an average of 30 days sooner than conventional construction! Plus, with accelerated permitting, your total project will be completed months before onsite construction.
- **Competitive** - Our streamlined assembly line production is highly efficient and enables us to compete in any market.
- **Depreciation** - Your modular building can be depreciated in 7 1/2-years compared to the 39-year schedule of a site built structure.
- **Quality Construction Practice** - Our buildings are built to last. Materials are noncombustible and designed to seismic earthquake and hurricane requirements where applicable. By using all steel and concrete construction, our buildings meet or exceed the most stringent structural design standards and for the distant future all components are recyclable.
- **Quality Assurance** - Each structure is subjected to rigorous inspections during the building process to ensure customer expectations are met. Our modular buildings are so thoroughly engineered and tested that they are more than a building they function as machines.
- **Consistency** - We understand the importance of operational consistency and branding. With our high degree of precision manufacturing and quality construction methods, our modular buildings are identical down to the last nut and bolt.
- **Controlled Environment** - By manufacturing the modular buildings in an indoor controlled environment, the potential delay in opening due to weather conditions is eliminated. The ease of having all store equipment received and installed prior to delivery simplifies the customer's experience.
- **Safety Benefit** - By providing a modular building, thousands of man hours are eliminated from the site development, reducing exposure to accident prone tasks associated with onsite construction.
- **Waste** - Our modular buildings are manufactured with minimal waste compared to a site constructed building making our structures a solid investment in the future.

**FREY**  **MOSS**
